

## List of Tables

Table 1. Interpreted Vegetation Coverages (acres) for 1940, 1985 and 1995 for the Northwest Fork and Adjacent Areas, from River Miles 4.5 to 11.2, Based on Aerial Photography. ....	17
Table 2. Synopsis of General Taxonomic Composition 1992–1997 (from Dent et al., 1998).....	32
Table 3. Relative Abundance and Ranking of the Most Abundant Fishes in the Loxahatchee Estuary .....	33
Table 4. Numbers of Fish Collected in Loxahatchee Estuary as a Function of Salinity (1982–1983) .....	34
Table 5. Quality Assessment of Water Body Segments of the Loxahatchee Estuary (FDEP 2001).....	37
Table 6. Generalized Hydrogeology of the Loxahatchee Watershed.....	44
Table 7. Acreage Percentage by Land Use for Subbasins within the Loxahatchee River Watershed.....	48
Table 8. Acreage by land use for subbasins within the Loxahatchee River watershed.....	48
Table 9. Major Wetland Systems in the Loxahatchee River Watershed.....	57
Table 10. Threatened and Endangered Animals and Species of Special Concern in the Loxahatchee River Watershed.....	59
Table 11. Threatened and Endangered Wetland Plant Species that Occur in the Project Area .....	60
Table 12. Problems Identified Within the Various Subbasins of the Loxahatchee River Watershed .....	65
Table 13. C-18 Flood Discharge Characteristics .....	69
Table 14. Water Quality Classification of Waters in the Loxahatchee River .....	76
Table 15. Comparison of SFWMD river mile locations to river mile and station locations identified in research literature.....	85
Table 16. DBHydro Flow Data Available for the Loxahatchee River and Estuary. ....	86
Table 17. Sites along the NW Fork of the Loxahatchee River where long-term salinity records were simulated using the hydrodynamic/salinity model. ....	89
Table 18. Dichotomous Key that was Used as the Basis for Determining the Abundance Index .....	93
Table 19. Measured Parameters for Key Species.....	94
Table 20. Vegetation Parameters Included in the Salinity-Vegetation Model.....	97
Table 21. Loxahatchee River Sites Used to Derive Model Formulas .....	97
Table 22. Total mean daily discharges to the Northwest Fork and corresponding upstream extent of the saltwater wedge in river miles (from: Russell and McPherson 1984).....	103
Table 23. Summary of Average Wet and Dry Season Flows to the Loxahatchee Estuary. ....	105
Table 24. Comparison of historical and more current flow conditions at the Lainhart Dam (Northwest Fork of the Loxahatchee River) based on USGS data from 1971 to 2000. ....	107
Table 25. Measured salinity from the NW Fork of the Loxahatchee River. ....	110
Table 26. Soil Salinity from Transects, Calculated from Conductivity and Chloride Analyses. ....	111
Table 27. Plant species observed in the Freshwater Segment of the Northwest Fork floodplain during quantitative and semiquantitative sampling periods, November, 2000 and January 2001 .....	120
Table 28. Abundance Index Results of a semiquantitative vegetation survey at river vegetation sampling locations, Northwest Fork, Loxahatchee River (November 2000/December 2001). ....	121
Table 29. Key species identified along the Northwest Fork and their salinity tolerances. ....	122
Table 30. Number of adults and saplings of selected tree species recorded during the January 2002 quantitative vegetation survey, at eight locations along Northwest Fork. ....	123
Table 31. Mean trunk diameter (DBH) and mean tree height of adults at eight river vegetation sampling locations, Northwest Fork of the Loxahatchee River (January 2002) .....	124
Table 32. Number of saplings and seedlings present at eight river vegetation sampling locations, Northwest Fork of the Loxahatchee River (January 2002). ....	125
Table 33. Summary statistics of estimated mean daily salinity concentrations for the 30-Year simulation period (1971-2001) for seven river vegetation sampling sites.....	136
Table 34. Salinity Event Duration (days) and Time Between Events (days), based on Simulated Salinity “Threshold” Levels, at Seven Sites along the Northwest Fork of the Loxahatchee River.....	137
Table 35. Flow required from Lainhart Dam to maintain mean daily salinity levels at selected river miles. ....	138
Table 36. Estimated Salinity Event Ratio ( $D_s/D_b$ ) at a 2 ppt Threshold Associated with a Decline of Measured Freshwater Vegetation Parameters. ....	142

Table 37. Output of the SAVELOX Model: Mean Salinity Event $\geq 2$ ppt Duration (days), Mean Time Between Events (days), and Flow (cfs*) associated with community vegetation parameter changes in Red Maple ( <i>Acer rubrum</i> ). .....	142
Table 38. Various Salinity parameters that can be used to protect the resource. ....	145
Table 39. Transect Lengths and Approximate Floodplain Elevations (NGVD) at each Transect .....	151
Table 40. Mean (standard deviation) difference between the Lainhart Dam water levels and those recorded downstream at each transect location (in feet NGVD). ....	152
Table 41. Percent of floodplain inundation related to flows over Lainhart Dam (excluding uplands and river channel). ....	153
Table 42. Major NPBCCWMP projects, cost, benefits and completion schedule for projects that will provide additional water for the Loxahatchee slough and river. ....	157
Table 43. MFL Recovery Program showing incremental improvements in the District's ability to meet the proposed 35 cfs flow target (based on output from NPBCCWMP models*). ....	162
Table 44. Loxahatchee River design and operational issues and ongoing or future activities that should address these concerns. ....	166
